License Agreement

LICENSE AGREEMENT openSUSE® Leap 42.2

This agreement governs your download, installation, or use of openSUSE Leap 42.2 and its updates, regardless of the delivery mechanism. openSUSE Leap 42.2 is a collective work under US Copyright Law. Subject to the following terms, The openSUSE Project grants to you a license to this collective work pursuant to the GNU General Public License version 2. By downloading, installing, or using openSUSE Leap 42.2, you agree to the terms of this agreement.

openSUSE Leap 42.2 is a modular Linux operating system consisting of hundreds of software components. The license agreement for each component is generally located in the component's source code. With the exception of certain files containing the "openSUSE" trademark discussed below, the license terms for the components permit you to copy and redistribute the component. With the potential exception of certain firmware files, the license terms for the components permit you to copy, modify, and redistribute the component, in both source code and binary code forms. This agreement does not limit your rights under, or grant you rights that supersede, the license terms of any particular component.

openSUSE Leap 42.2 and each of its components, including the source

EULA location in the installed system: /etc/YaST2/licenses/base/

The desktop environment on your computer provides the graphical user interface for your computer, as well as a suite of applications for email, Web browsing, office productivity, games, and utilities to manage your computer.

Desktop Selection

openSUSE offers a choice of desktop environments. The most widely used desktop environments are GNOME and KDE Plasma, and they are equally supported under openSUSE. Both desktop environments are easy to use, highly integrated, and have an attractive look and feel. Each desktop environment has a distinct style, so personal taste determines which is the most appropriate desktop for you.

[Slide Show](#)[Details](#)[openSUSE Release Notes](#)

Welcome to openSUSE™!

openSUSE is the makers' choice for sysadmins, developers and desktop users because it gives you more choices than other distributions. openSUSE Leap combines proven core packages from SUSE Linux Enterprise with community built packages, which creates synergies for the project's distribution. Get the Best of Both Worlds with openSUSE Leap. openSUSE releases provide users a feature-rich server environments and user-friendly desktop. Enthusiasts and professionals looking for a long-term, highly stable Linux system need to look no further than openSUSE Leap 42.2, which complements the latest SUSE Linux Enterprise due to the shared sources. Thank you for making the change to use the most dependable and stable Linux system - openSUSE Leap 42.2.

The screenshot displays a GNOME 3 desktop environment. At the top, a dark blue header bar contains five application icons: Terminal, Firefox, gedit, Rhythmbox, and Shotwell Photo M... Below the header is a large, semi-transparent dark overlay containing the same five icons, with the Firefox icon highlighted. The main workspace features two large, rounded rectangular windows. The left window shows the Mozilla Firefox homepage for "GNOME 3 – Made of Easy". The right window shows the "GNOME: The Free Software Desktop Project" homepage. Both windows have a standard GNOME 3 header with tabs and a search bar.
