

ΕΙΣΑΓΩΓΗ ΣΤΟ SUSE STUDIO

Ευστάθιος Ιωσηφίδης

Τι είναι το SUSE Studio...

- Είναι μια δικτυακή εφαρμογή για χτίσιμο προσαρμοσμένων διανομών Linux
- Μπορείτε να φτιάξετε Live CDs, εικόνες VM, εικόνες EC2 κα
- Χρήση δωρεάν στην διεύθυνση susestudio.com από τον καθένα.

openSUSE™

Welcome to SUSE Studio!

Configure your appliance using the tabs above.

When you're finally done making everything the way you want, visit the [Build tab](#) to generate your appliance.

But first, give your appliance a name! It will be used in the boot screen, and in several other places.

Appliance name:

Boot

A screenshot of the openSUSE Linux desktop environment. The desktop background features a green and blue abstract pattern. In the top right corner, there is a small icon of a penguin wearing a blue cap. On the left side, there is a vertical bar with several icons. The bottom of the screen shows a dock with three application icons: a browser, a file manager, and a terminal window.

Custom scripts

Run commands specific to your appliance, at the end of build, or at boot time.

 Run script at the end of the build

```
#!/bin/bash -e
#
# This script is executed at the end of appliance creation. Here you can do
# one-time actions to modify your appliance before it is ever used, like
# removing files and directories to make it smaller, creating symlinks,
# generating indexes, etc.
#
# The 'kiwi_type' variable will contain the format of the appliance (gem =
# disk image, vmm = VMware, iso = CD/DVD, xen = Xen).
#
# read in some variables
. /studio/profile

# read in KIWI utility functions
. ./kconfig
```

 Run script whenever the appliance boots

```
#!/bin/bash
#
# This script is executed whenever your appliance boots. Here you can add
# commands to be executed before the system enters the first runlevel. This
# could include loading kernel modules, starting daemons that aren't managed
# by init files, asking questions at the console, etc.
#
# The 'kiwi_type' variable will contain the format of the appliance (gem =
# disk image, vmm = VMware, iso = CD/DVD, xen = Xen).
#
# read in some variables
. /studio/profile

if [ -f /etc/init.d/suse_studio_firstboot ]
then
    # Put commands to be run on the first boot of your appliance here
    echo "Running SUSE Studio first boot script..."
fi
```

Overlay files

Files added here will be copied into the appliance after packages are installed. Adding files is optional.

- **Single files** will be copied to the specified directory.
- **Archives** (.tar, .tar.gz, .tar.bz2, .tgz, or .zip) will be extracted into the directory specified. Permissions and hierarchy will be preserved. Using archives is a great way to add many files at one time.

openSUSE Project
The [openSUSE project](#) is a community program sponsored by [Novell](#). Promoting the use of Linux everywhere, openSUSE.org provides free, easy access to the world's most usable Linux distribution, openSUSE. You'll find more information available in many languages on the [project wiki](#). For the latest news, visit our [openSUSE News](#) portal.

Community Support
The openSUSE community are helpful people. Various ways exist to contact other openSUSE members, ask questions, discuss openSUSE and Linux. The official [openSUSE Forums](#) are very accessible. Other ways including online chat are described on our [Online Help](#) site.

Build Service
The [openSUSE Build Service](#) is an open and complete distribution development platform. It provides software developers with a tool to compile, release and publish their software for a broad user audience. For non-developers it offers a large collection of easy to install software packages. Just visit the [openSUSE Software](#) site.

Have a lot of fun!

suse studio™ Test Drive 53:47 Modified Files Networking: on Live CD/DVD

Networking in testdrive

If your appliance is configured to use DHCP, it will be connected to the network in a limited way so that you can SSH in and perform some basic tests.

You will **not** be able to make outgoing connections. Your IP address, 188.4.234.155, is the only host that can connect to your testdrive. Ports 22, 80, 443, and 54984 (WebYaST) are mapped to ports 16022, 16080, 16443, and 16984 on host node51.susestudio.com.

[Disable networking](#)

SSH into your testdrive

To SSH into your testdrive, you can use this command:

```
ssh -o "UserKnownHostsFile /dev/null" -p 16022 root@node51.susestudio.com
```

You can also SCP files into and out of your testdrive (take note: SCP uses the -P option to set the port, with a capital P, whereas SSH uses a lowercase p).

```
scp -o "UserKnownHostsFile /dev/null" -P 16022 filename  
root@node51.susestudio.com:
```

Try out WebYaST

If you have WebYaST installed and enabled, you can access it on port 54984 of your testdrive using this link:

<https://node51.susestudio.com:16984/>

Try out your web app

To access a web server on port 80 of your testdrive, use this link:

<http://node51.susestudio.com:16080/>

To access a secure web server on port 443 of your testdrive, use this link:

<https://node51.susestudio.com:16443/>

Connect using a VNC client
